

CAMERON ELY-MURDOCK

AI BUSINESS SYSTEMS ADMINISTRATOR

Boulder, Colorado • murdock.cameron@gmail.com • (720) 645-6281
camalot.me/portfolio • github.com/cameronmurdock

SUMMARY

AI business systems administrator and systems integrator who connects the tools a business actually runs on—AI agents, websites, social media, databases, software, accounts, and workflows. I turn scattered systems and repetitive work into clear, maintainable operations that save time and reduce friction.

CORE SERVICES

- Inference engineering & agent orchestration — JEV Sys 1 routing, NLP Sys 2 reasoning, permission-aware context, deterministic validation, and human checkpoints.
- Websites, SEO & GEO — web design/build, technical SEO, structured data, analytics, LLM SEO, and Generative Engine Optimization for AI search.
- Social media systems — content planning, approvals, scheduling, multi-channel publishing, and performance workflows.
- Integrations & automation — APIs, webhooks, databases, sync scripts, and automations that move information between services.
- Systems administration — accounts, permissions, documentation, handoffs, data flows, and ongoing process improvement.

EXPERIENCE

Founder & Systems Architect

Rivr | Boulder, CO | 2023–Present

- Lead architecture and operations for a coordination platform spanning groups, events, work, payments, governance, messaging, and shared resources.
- Built a permission-aware assistant architecture combining subjective knowledge graphs, episodic memory, semantic retrieval, and document intelligence into a user-specific working model.
- Engineered JEV Sys 1 for fast routing and classification, LLM-backed NLP Sys 2 for deeper reasoning, and deterministic validation so natural language becomes correctly placed Rivr tasks, decisions, knowledge, and workflows.

Independent Consultant — AI, Web & Business Systems

Various Clients | 2021–Present

- Design and administer websites, automations, AI workflows, integrations, and operating systems for small organizations.
- Translate fragmented or manual processes into maintainable workflows, documentation, and connected tools.
- Build client-owned systems with secure account handoff, clear permissions, and practical long-term administration.

Operations, Systems & Bookkeeping

The Riverside | Boulder, CO | 2022–Jan 2026

- Unified point-of-sale, payroll, scheduling, bookings, ticketing, staff tools, websites, and reporting; maintained the books and financial records.
- Integrated Clover, Tripleseat, Connecteam, Stripe, Notion, and custom services through APIs, webhooks, sync scripts, and shared data.
- Built operational tooling that let staff and AI assistants query business systems for reporting, coordination, and day-to-day decisions.

Bookkeeper

SPIRIT of the Front Range | Boulder, CO | Jan 2026–August 2026

- Maintained financial sheets, income/expense records, receipts, budgets, and supporting documentation for nonprofit reporting and year-end preparation.

Co-Founder & Operations Director

ONE|Boulder | Boulder, CO

- Co-founded the community platform, directed operations, and planned community engagement through its app, directory, and events.

Founding Business Development

The Stand | Boulder, CO | 2020–2026

- Helped establish and grow the business through partnerships, customer experience, and day-to-day operations.

Earlier Operations & Cooperative Work

Colorado | 2013–2020

- Seven years running greenhouse, ranch, production, and cooperative operations, building practical systems for inventory, schedules, people, resources, and shared work.

SELECTED SYSTEMS & PROJECTS

- Denver Contact Improv / Art of Living CI — built two fast Next.js sites with technical SEO, structured data, canonical/sitemap strategy, LLM SEO/GEO, and a private AI-assisted editing workflow.
- Rivr Social Post Planner — designed scheduling and delivery across Instagram, Facebook, Telegram, Discord, Slack, native feeds, and newsletters with approvals and per-channel status.
- Riverside Operations Stack — unified bookings, shifts, sales, ticketing, staff tasks, event records, and reporting across multiple business services.
- Client Ownership Protocol — secure handoff for domains, DNS, hosting, repositories, SSH, cloud access, secrets, and AI subscriptions so clients retain control.

TOOLS

AI agents & workflows • MCP • Claude Code • OpenAI Codex • APIs • REST • Webhooks • TypeScript • JavaScript • Python • SQL • React • Next.js • Node.js • PostgreSQL • Supabase • Cloudflare Workers • Docker • Git • Stripe • Notion • Airtable • Google Workspace • Connecteam • Clover • Tripleseat • Technical SEO • LLM SEO / GEO • Structured Data

EDUCATION

Bachelor of Arts, Anthropology — University of Colorado Boulder
